DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Where applicant acts as his or her own lexicographer to specifically define a term of a claim contrary to its ordinary meaning, the written description must clearly redefine the claim term and set forth the uncommon definition so as to put one reasonably skilled in the art on notice that the applicant intended to so redefine that claim term. *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999). The term “inverter” in claims 1, 3, 4, 7, 8, is used by the claim to mean “converter”, while the accepted meaning of “an inverter is a converter that converts DC to AC.” The term is indefinite because the specification does not clearly redefine the term.

Claim Objections

2. Claims 1 and 8 are objected to because of the following informalities: The phrase “more or less power” is superfluous in the claim. Power is simply delivered to the output circuit. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 2838

4. Claims 1-3, 6-11 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Hwang (USP 6,531,854). Hwang discloses an AC input (Vac), a DC output (Vout), a converter that accepts AC and outputs DC voltage, a sensor/ sampler (Visense), a feedback loop (Vosense), in which these signals are combined in the multimode controller (134) to correct power factor and regulate the output voltage.

Allowable Subject Matter

5. Claim 4 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claim 4 is allowed.

7. The following is an examiner's statement of reasons for allowance: None of the prior art alone or in combination discloses a power factor correction circuit having a third circuit for combining samples taken from said AC voltage-input waveform and said regulated DC-power output into a single control signal and a fourth circuit for operating a single power conversion with said single control signal to regulate its output according to a weighted combination of the instantaneous AC voltage present at said AC power input and an average DC voltage present of said DC power output.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
